

# AKASH DAS

## Senior Software Engineer | Backend, Platform & Distributed Systems

Kolkata, India | +91 85849 84265 | akash42662012@gmail.com | linkedin.com/in/akash291298

### PROFESSIONAL SUMMARY

Senior backend and platform engineer with 6 years of experience delivering high-volume ecommerce, healthcare, mobile, and integration-heavy systems. Owned cloud infrastructure and business-critical services processing millions of requests, improved delivery-date accuracy from approximately 30% to 95%, and led customer communication initiatives that reduced support calls by approximately 35% and annual costs by about INR 3 crore.

### CORE SKILLS

**Backend & Architecture:** Node.js, TypeScript, NestJS, REST, GraphQL, microservices, event-driven systems, API and schema design

**Cloud & Delivery:** AWS EKS, Kubernetes, Docker, Jenkins, CI/CD, SigNoz, AWS EC2/S3, GCP

**Data & Integrations:** MongoDB, PostgreSQL/SQL, Redis, RabbitMQ, Firebase, Shopify, LeadSquared, WebEngage

**Frontend & Mobile:** React, Next.js, React Native, Capacitor, Material UI

**Languages:** JavaScript, TypeScript, C#, C

### PROFESSIONAL EXPERIENCE

#### The Sleep Company | Software Development Engineer II

Oct 2024 - Apr 2026

Mumbai, India | NestJS, Node.js, MongoDB, Redis, AWS EKS, Kubernetes, Jenkins, SigNoz

##### Infrastructure & Platform

- Overhauled and independently owned the AWS EKS platform for new backend services, establishing deployment standards, automatic scaling, CI/CD, production observability, alerting, and ongoing operations.
- Supported the Leads Service at **3,611,900 requests in 30 days** and the EDD Service at **3,617,080 requests** over three months, including a **198%** Diwali traffic increase. Kept normal-load infrastructure lean with a **two-replica baseline** and scaled automatically up to **ten replicas**, providing **5x capacity headroom** while making peak compute cost demand-driven rather than permanently provisioned.
- Deployed and managed self-hosted Jenkins and SigNoz, creating repeatable delivery pipelines, production dashboards, and Slack alerts for critical and non-critical anomalies.

##### Leads Service

- Replaced a Google Sheets-based lead-capture middleware with a centralized service that collected leads and activities from system-wide touchpoints, enriched them with Shopify metadata, applied configurable routing rules, and coordinated data across LeadSquared, WebEngage, Justdial, Gupshup, and internal systems.
- Increased captured volume from **177,080 leads** in Nov 2024 to **349,474** in the Dec 2024 launch month - a **97% increase** - and later sustained **626,470 leads** and **3,611,900 requests** in 30 days, approximately **3.19x** the daily volume of the first full backend month.

##### EDD Service

- Built the centralized source of truth for cart and order delivery estimates, combining product, warehouse, location, courier, holiday, manufacturing, stock, and express-delivery constraints with data from ClickPost, FYND, Shopify, and EasyEcom.
- Improved EDD accuracy from approximately **30% to 95%**, reduced customer calls by approximately **10%**, and contributed about **INR 1 crore** in annual cost savings. During the Diwali period, the service supported **31,463 sales records** and approximately **1.45 million requests** - about **199%** above the previous month.
- Added Redis-backed product-data caching, administrative sheet uploads for holidays, variant delays, and out-of-stock data, version history with backup and restore, and automated product OOS alerts.

##### EventScheduler Service

- Designed a reusable service for scheduling custom or template-based future events, with centralized execution handling; initially used as the scheduling foundation for customer notifications.

##### Overcommunication

- Overhauled approximately 10 existing notifications and introduced **30+ new notifications** across order placement, processing, dispatch, delivery, cancellation, and RTO journeys using the EventScheduler, EDD, and notification services. Reduced customer calls by approximately **35%** and annual support costs by about **INR 3 crore**.

##### Customer Reviews

- Built and maintained the CRUD APIs supporting customer reviews displayed across the ecommerce website.

## PROFESSIONAL EXPERIENCE (CONTINUED)

---

### Horecah | Freelance Software Engineer

Sep 2024 - Oct 2024

Remote | Capacitor, Node.js, Hasura GraphQL, Razorpay, FCM, APNs

- Built a hospitality-focused hiring and job-search application for web, Android, and iOS using a shared Capacitor client with a Node.js and Hasura GraphQL backend.
- Integrated Razorpay across all three platforms through its Capacitor plugin, forking and adapting the upstream repository to resolve compatibility issues while preserving a single payment implementation.
- Implemented cross-platform push notifications using Capacitor, Firebase Cloud Messaging, and Apple Push Notification service.

### Codecraft Technologies Pvt. Ltd. | Engineer, Software Development

Jul 2022 - Jul 2024

Bengaluru, India | NestJS, Node.js, PostgreSQL, MongoDB, RabbitMQ, React

- Delivered backend and full-stack functionality across five healthcare, consumer, gaming, and hospital-IoT products.

#### WhereToGo

- Developed NestJS microservices with PostgreSQL and RabbitMQ for a cross-platform food and drink discovery application, including recommendation-engine integration.

#### Clinical Trials

- Designed and developed NestJS and PostgreSQL APIs for a platform providing medical research and clinical-trial data.

#### Montefiore Nurture & Cox ProSight

- Built Node.js and MongoDB APIs for a cancer-patient diet recommendation application and full-stack React/Node.js features for a hospital IoT device-management platform.

#### EliteGamer

- Implemented React features and Chart.js visualizations for a PC gaming application focused on reducing online-game latency.

### Medicomp Solutions | Full-Stack Developer

Aug 2021 - Jul 2022

Remote | React Native, Node.js, GraphQL

#### Yeats iPad

- Delivered the majority of the iOS patient-management application, implementing approximately 80% of the existing web/.NET product functionality in React Native and GraphQL.
- Developed patient-management workflows across the mobile interface and supporting Node.js/GraphQL APIs.

### ValueDot | Full-Stack Developer

Nov 2020 - Jul 2021

Kolkata, India | React, Node.js, MongoDB, Docker, AWS

- Designed and developed an OCR-based workflow that converted scanned documents into structured spreadsheets, delivering the initial working proof of concept in one week.
- Implemented full-stack features and a modular service architecture using React, Node.js, MongoDB, Docker, and AWS services; the product remained in development and was not represented as a production deployment.

### SlideOnline | Front-End Developer

May 2020 - Oct 2020

Remote | React, Material UI

- Delivered the React and Material UI frontend for an online-events platform in under three months.

## SELECTED FRONT-END PROJECT

---

### Tetris | Front-End Design & Development

Independent Project

Next.js, TypeScript

- Designed and built the playable browser frontend for a classic Tetris game, including responsive gameplay interactions and UI.
